SUMMARY

Full Stack Engineer and AI Integration Specialist with 3+ years building production-grade SaaS platforms, ERP systems, and AI-powered web applications at a software agency. Expert in React.js, Next.js, Node.js, and Backend API development, with a strong specialization in OpenAI API integrations (GPT-4o, Vision), scalable system architecture, and end-to-end product ownership. Delivered 5+ client-facing products from schema design to deployment.

TECHNICAL SKILLS

AI Engineering: OpenAI API (GPT-4o, Vision), LLM Integration, AI Agents, Prompt Engineering, n8n Workflow Automation, Chatbot Development

Frontend: React.js, Next.js, TypeScript, JavaScript (ES6+), Tailwind CSS, Shadcn UI, Framer Motion, GSAP

Backend & APIs: Node.js, Express.js, REST API Design, JWT, OAuth2, RBAC, Backend APIs, Postman

Databases: MongoDB (Aggregation Pipelines), PostgreSQL, Supabase, MySQL

Cloud & DevOps: Vercel, CI/CD Pipelines, Git, GitHub

Payments & Integrations: Stripe, Cloudinary, Gmail API, Google OAuth 2.0, Spotify API

EXPERIENCE

Full Stack Engineer – AI & SaaS Applications

Apr. 2023 – Present

NextStac

Lahore, Pakistan

- Owned end-to-end delivery of 5+ production SaaS and ERP applications – from system architecture and database schema design to client deployment – using React.js, Next.js, Node.js, and MongoDB.
- Drove AI integration across client products by embedding OpenAI API (GPT-4o) features including document intelligence, content generation, and automated decision workflows, positioning AI as a core product capability.
- Architected multi-tenant Backend APIs secured with JWT, OAuth2, and RBAC, enabling scalable permission layering and secure authentication flows across SaaS platforms.
- Reduced client manual reporting overhead by building modular ERP dashboards with Supabase real-time subscriptions and MongoDB aggregation pipelines.
- Achieved Lighthouse performance scores above 85 on mobile and desktop across all delivered frontends by engineering responsive UIs with Tailwind CSS and Shadcn UI.
- Integrated Stripe payment processing, Cloudinary media pipelines, and OpenAI API into live products; maintained zero-downtime production releases via Vercel CI/CD.
- Collaborated directly with clients to define product requirements, iterated through Agile sprints, and upheld code quality through structured peer review cycles.

MERN Stack Developer – Intern

Jan. 2023 – Apr. 2023

NextStac

Lahore, Pakistan

- Delivered a full customer portal prototype using MERN stack and Next.js two weeks ahead of schedule, adopted directly into production.
- Reduced API login response time from ~800ms to under 300ms (62% improvement) by optimizing MongoDB schema indexing and rewriting Node.js/Express.js authentication endpoints.
- Built reusable React component library with Tailwind CSS and Shadcn UI; components were integrated into the team's shared design system.
- Established CI/CD deployment habits via GitHub and Vercel; actively participated in daily standups and weekly code reviews from day one.

PROJECTS

DoxRadar AI – Document Intelligence SaaS | *React, Node.js, PostgreSQL, OpenAI API (GPT-4o), Gmail API* 2025

- Architected an AI-powered SaaS platform that autonomously ingests and processes PDF, DOCX, Excel, and image files from Gmail inboxes via Gmail API and Google OAuth 2.0 – eliminating manual document handling.
- Built an LLM-driven Action Intelligence Engine using GPT-4o and Vision models to detect late-fee risks, generate billing negotiation scripts, and flag phishing/scam documents with structured AI reasoning.

- Delivered multi-format parsing pipeline and real-time document dashboard backed by Supabase (PostgreSQL), enabling instant document status visibility for end users.

Gym CRM Growth OS | *React, TypeScript, Node.js, Supabase, Tailwind CSS, PWA* 2025

- Designed and shipped a full-stack SaaS gym management platform with member CRM, payment tracking, plan management, and QR-based attendance check-in – replacing manual gym workflows end-to-end.
- Deployed as an installable Progressive Web App (PWA) with offline caching and service worker support, achieving mobile-first usability without app store distribution overhead.
- Built broadcast messaging and team invite workflows to streamline gym staff coordination across locations.

AI Resume & Portfolio Builder | *React, Node.js, MongoDB, OpenAI API* 2024

- Built a SaaS tool that generates tailored resumes and portfolio websites using OpenAI API-driven content personalization; RESTful Backend APIs handle user data persistence and session management at scale.

Forever E-Commerce Platform | *React, Next.js, Node.js, Express, MongoDB* 2024

- Delivered a production-ready e-commerce platform with full product catalog, cart and checkout flow, and an admin dashboard covering user, product, and order management end-to-end.
